

VALIDATION CERTIFICATE

Pioneer validates that the following alfalfa products were developed using traditional plant breeding without the use of molecular genetic modification techniques. Pioneer sets seed purity standards to ensure that products purchased by our customers are as pure as possible. However, seed traits can be mingled mechanically in the handling process or genetically in the course of pollination. Thus 100% purity, either in genetic make-up or in the absence of foreign material content is currently not achievable for any agricultural product, including alfalfa seed.
